

RJ Furniture

Office Space. Reimagined

ENVIRONMENTAL

RJ Furniture is committed to sustainability. For more than 30 years part of our philosophy has been to maintain a “Green Culture” In everything we do, we strive to follow these principles.

By following these common sense guidelines, we will go a long way toward providing future generations with a livable planet.

Our stance on environmental best practices is good business.

If a customer ever decides that the furniture they have purchased from us is no longer of any use to their business, we will come and pick it up, haul it away, and dispose of it properly.

FACTS & FIGURES

Over the past five years our customers have purchased more than 7,500 refurbished steel workstations with all new 100% recycled fabric, and more than 2,500 pre-owned steel workstations.

The total amount of energy saved by re-using the steel alone is 80 billion BTUs. That's equal to the energy required to drive around the earth 500 times!

The steel would weigh 8 million pounds, enough to make 800 full size school buses.

RJ has donated more than 100 truckloads of furniture to charity.

This also helped us save:

-  5,000 tons of iron ore
-  2,800 tons of coal
-  240 tons of limestone
-  20 acres of landfill space
-  4,000 tons of CO2

It takes 1,000 trees 660 years to absorb that much CO2

Because RJ workstations use 100% recycled Terratex® Fabric from Inerface Corporation, 36 tons of plastic soda bottles found new life outside of the land fill. The energy saved?

2 billion BTUs. That's enough to heat a Chicago home for 20 years.

Municipal solid waste represents only 1% of the U.S. total.

The largest source of waste is from industry. Thus the greatest benefits of recycling come from being able to shift the methods of production in order to replace virgin materials with recycled materials

That's why at RJ we recycle everything we possibly can!
